Prof. Arjen EJ Wals (University of Gothenburg, Sweden)
Prof. Dr. Bornok Sinaga, M.Pd (Unimed, Indonesia)
Prof. Dr. Aytekin Isman (Sakarya University, Turkey)
Prof. Peter Charles Taylor, Ph.D., Med., B.Sc., Dip.Ed (Murdoch University, Australia)
Prof. Dr. Mukhlas Samani, Ph.D (Indonesia)
Prof. Dr. Jailani bin Md. Yunos (University Tun Hussein on Malaysia)
Prof. Dr. Nurahimah Mohd. Yusuf (UTM, Malaysia)
Assoc. Prof. Dr Pedro Isaias (University of Queensland, Australia)
Assoc. Prof. Elisabeth Taylor, Ph.D (Murdoch University, Australia)
Dr. Bambang Sumintono, M.Ed (Universiti Malaya, Malaysia)
Dr. Isma Widyaty, M.Pd (UPI, Indonesia)
Prof. Dr. Syahrul R, M.Pd (UNP, Indonesia)
Prof. Amrin Saragih, MA., Ph.D (Unimed, Indonesia)
Assoc. Prof. Ade Gafar Abdullah, M.Si (Universitas Pendidikan Indonesia)
Eng. Asep Bayu Dani Nandiyanto (Universitas Pendidikan Indonesia)
Prof. Dr. Hartono, M.Pd (Universitas Negeri Semarang)

Please cite the proceeding as “Proceeding of the First Annual International Seminar on Transformative Education and Educational Leadership Vol. 2” with the following abbreviation: Proc. Aist., 2
Preface

The 2nd Annual International Seminar on Transformative Education and Educational Leadership (AISTEEL with web link is http://aisteel2017.unimed.ac.id/) was held on October 16 -17, 2017 in Medan City, Indonesia. This conference was organized by Postgraduate School, State University of Medan (Unimed) and is the routine agenda at Unimed now. The Second Annual International Seminar on Transformative Education and Educational Leadership’ is realized this year with various presenters, researchers, lecturers and students from universities both in and out of North Sumatera participate in the theme of which is “Educational Research to Endorse Productive and Innovative Generation in the 21st Century.”

2nd AISTEEL is the annual international seminar with main aim is to discuss of recent research special for Transformative Education and Education Leadership. Several topics like: Teachers Education Model, Research Global Issue in Education, Mathematics and Science Education, Social, Language Education, Vocational Education, Curriculum, Economic, History and Management Education have been discussed at the 2nd AISTEEL 2017. 2nd AISTEEL international seminar provided experts’ view on transformative education and educational leadership as well as curriculum article presentation. There were five keynote speakers have been came Professor Keiichiro Yoshinaga, Dr. Bambang Sumintono, Dr. Sitti Maesuri Patahuddin, and Dr. Yulia Rahmawaty. The organizer had been use online submission system to receive all abstract, full paper and also communication with authors. All of information include with comment of reviewer can be cheked real time by author.

Chairperson

Dr. Rahmad Husein, M.Ed
Welcoming Speech of Director of Postgraduate School State University of Medan

The Second Annual International Seminar on Transformative Education and Educational Leadership (AISTEEL)

The honorable,
- Rector of State University of Medan, Prof. Dr. Syawal Gultom, M.Pd.
- Vice Rectors of UNIMED
- Professor Keiichiro Yoshinaga, PhD, Institute of Liberal Arts and Science, Kanazawa University – Japan
- Dr. Bambang Sumintono, M.Ed., University Malaya – Malaysia
- Dr. Sitti Maesuri Patahuddin, Faculty of Education, Science, Technology and Mathematics, University of Canberra – Australia
- Yuli Rahmawati, Chemistry Education Program, Universitas Negeri Jakarta
- Deans of Faculties of Education, Languages and Arts, Social Sciences, Natural Sciences and Mathematics, Engineering, Sports Sciences, and Economics
- Vice Directors of Postgraduate School of UNIMED
- All speakers, lecturers, researchers, students, and participants

Good Morning

Welcome the honorable guests speakers Professor Keiichiro Yoshinaga, Dr. Bambang Sumintono, Dr. Sitti Maesuri Patahuddin, Assoc. Prof. Emilia Zulmira de FAN, and other speakers, lecturers and students from outside and inside Unimed to this international seminar which is the routine agenda at Postgraduate program of Unimed now. I’m glad that ‘The Second Annual International Seminar on Transformative Education and Educational Leadership’ is realized this year with various presenters, lecturers and students from universities both in and out of North Sumatera and participate in the theme of which is “Educational Research to Endorse Productive and Innovative Generation in the 21st Century.”

Ladies and Gentlemen,

In this second seminar excels the first one related to the administration by online and the publication index by either Thomson Reuters or Google Scholiar. By the new policy on student’s publication, postgraduate program really matches the system, particularly for the students who will sit in the oral defence examination. Through the seminar, the postgraduate students improve their article journal writing and it is proved by many articles are submitted by the students.

The plenary speakers coming from 15 provinces in Indonesia will present topics covering multi disciplines. They will contribute a lot of inspiring inputs and new knowledge on current trending educational research topics all over the world. The expectation is that all potential lecturers will share their research findings to educational scientists and researchers as well for improving their teaching process and quality. Thus, this will contribute to the next young generation researchers to produce innovative research findings in education and educational leadership contexts.

This second seminar continues the promotion of the first sequel ‘Developing Future Teachers’ Education Model. Therefore, the propose of this second seminar on the transformative education and educational leadership research will trigger the young professional lecturers and educators to compete in the invention of innovative educational teaching and learning strategies, techniques and leadership.

I hope that the scientific attitude and skills through research will promote Unimed to be a well-known university which persists to be developed and excelled in the future.

Thank you the Rector of Unimed who always supports us in organizing the seminar. Thank you all guest and plenary speakers. Special thanks to both steering and organizing committee who have well-coordinated and collaborated in actualizing the seminar.

Director of Postgraduate Unimed

Prof. Dr. Bornok Sinaga, M.Pd

Abstract—This research aimed to produce valid, practice, and effective learning materials using realistic mathematics education. Moreover, the learning materials designed is intended to help students improve their mathematical disposition and mathematical connection ability. This is a developmental research using the 4-D model. Instrumentation consists of observation sheet, lesson plan, teacher’s and student’s book, mathematical connection test, and questionnaire on mathematical disposition. The first trial took place in class VI-C and the second trials in class VII-B SMP Swasta Siti Hajar Medan. The result of the study indicated that learning tools (materials) developed valid both in terms of content and construct, practice, and effective. The students mathematical connection ability increased within medium category, whereas their mathematical disposition increased from the first to the second trial.

Keywords development of learning tools, realistic mathematics education, mathematical disposition and connection ability.

I. INTRODUCTION

The quality of education is closely related to the quality of learning. Because the quality of education will create a smart, open, peaceful, and democratic life.

Various efforts have been made Kemendikbud to improve the quality of national education. One of them is implementing the 2013 curriculum as a refinement of the previous curriculum. [1] also explains "the standard of graduation competency in the 2013 curriculum based on Permendikbud number 54 year 2013 is that students must have effective and creative thinking and acting in the abstract and concrete realms according to the ones studied in schools and other similar sources'. That way students should have the ability to think creatively in learning."

The ability to think especially high-level mathematical thinking in the students themselves does not just appear but needs to be developed. One of the mathematical abilities included in the Higher Mathematical Thinking Ability is mathematical connection ability.

Judging from the results of the researchers’s survey in the form of providing diagnostic tests to students of class VII SMP Swasta Siti Hajar Medan showed that 82% of the number of students have difficulty in solving the problem of mathematical connections. In the research conducted by [2] also found that students are often able to register mathematical concepts related to real problems, but few students are able to explain why the concept is used in the application.

In addition to develop cognitive abilities, mathematics learning also develops affective attitudes. This is in line with the long-term goal of mathematics learning, which imparts higher ability to think like analytic, critic and creative, resulting in mathematical dispositions and social skills cultivation [2]. The development of the affective domain that
began the objective of mathematics education at the junior high school level according to the 2006 curriculum is essentially growing and developing mathematical dispositions.

Viewed from the affective sphere, the mathematical disposition of students needs to be developed because mathematical disposition affects the success of students in solving mathematical problems well. Correspondingly, students' mathematical disposition abilities must be improved because, according to [3] "student disposition toward mathematics is the major factor in determining their educational success". From these statements indicate that mathematical disposition is a major factor in determining the success of learning mathematics students.

However, students' disposition to mathematics is still low. This is proved in the preliminary study of researchers to school. From the results of given questionnaires that the students’ response to mathematics is still negative as students are less interested, not confident and easily desperate when solving math problems. The result was obtained from the questionnaire of disposition ability in the form of statement as many as 15 points with the answer choice Strongly Agree, Agree, Disagree and Strongly Disagree to Private Junior High School student Siti Hajar Medan.

In response to the problems that occur in the learning process of mathematics in schools, especially related to the importance of the ability of connection and mathematical disposition of students which ultimately resulted in low mathematics learning outcomes, it is needed a solution of learning approach that can accommodate the increased ability of connections and mathematical disposition of students. One approach to learning that can be used is the Realistic Mathematics Education (RME). Judging from its characteristics, PMR can encourage students to be able to develop learning more actively and more meaningfully and can improve students' mathematical connection and disposition [4].

In addition, to be able to improve the ability of students' mathematical connections and dispositions, it is necessary to have a good learning tool prepared by the teacher. Teachers should be able to develop effective and interesting learning tools for students to have a positive response to the learning delivered. Creativity in developing learning resources is very important by developing learning tools in accordance with methods, learning strategies and abilities to be gained in the learning process. For that, teachers are required to prepare the design of learning such as developing learning tools.

Based on the above, we need a tool based on RME to overcome the low ability of connection and mathematical disposition of students and a learning device that characteristics and steps in accordance with the needs of students and can improve the ability of students' mathematical connections and dispositions. Furthermore, the device can also be used by teachers in the learning process. Therefore, researchers develop learning tools using RME to improve students' mathematical connection and disposition skills.

II. LITERATURE

Connection Ability
Mathematical connection is one of the standard capabilities set by the National Council of Teachers of Mathematics or NCTM and has been adopted and used in mathematics learning. The mathematics learning formulated by[5] outlines that students must learn mathematics through understanding and actively building new knowledge from previously possessed experiences and knowledge. Mathematical connection is defined as the relationship of mathematical ideas, the interrelation between internal mathematical concepts or external relationships [6].

Mathematical Disposition
Mathematical disposition is one of the factors that contribute to determine success in learning mathematics. A student with a high disposition will be more persistent and resilient in the face of more challenging math problems and will be more responsible for their own learning and always develop good habits in mathematics. This is in accordance with the opinion of [7] says that mathematical disposition relate to how students solve mathematical problems, whether they solve them with confidence, diligence, interest, and flexible thinking to find various solutions to problem solving.

Realistic Mathematics Education (RME)
Realistic mathematicseducaction is one of the learning approaches that conforms to the change. RME was first introduced and developed in the Netherlands in 1970 by a group of mathematicians from the Freudenthal Institute, Utrecht University in Holland. This approach is based on the concept of Freudenthal who argues that mathematics is a human activity. With the main idea is that students should be given the opportunity to reinvent ideas and mathematical concepts with adult guidance.

According to [8] the characteristics of RME are using contextual problems, models, production and construction of students, interactivity and intertwimment.

III. METHOD
This research includes development research using 4-D model of development Thiagarajan, Semmel, and Semmel (1974).

Subject and Object
Subjects in this study were students of class VII of SMP Swasta Siti Hajar Medan 2016/2017 academic year, whereas the object of this research werealerning materialsusing realistic mathematics education. Trial 1 was done in class VII B and trial 2 was done in class VII C.

Developing Learning Material
Learning materials developed in this study were lesson plans, teacher’s book, student’s book, student’s work sheets. Instrumen for collecting data in this stuy are tests, questioners and observation sheets. Developing learning material was done by using the 4-D model which consisted of
4 steps that were defining, designing, developing and disseminating.

**Instrumens and Data Data Analysis Techniques**

4. **The Validity of Learning Materials**

Learning materials are said to be valid if they meet the criteria of content validity and construct validity. The validity of content was done by 5 validators by giving score 1 to 5 in each assessment column based on aspects: 1) format, 2) language, 3) content, and 4) illustrations. Furthermore the overall expert assessment was processed by calculating the average score to obtain the criteria of content validity assessment and will be outlined in Tabel 1.

Table 1. Rate Validity Criteria of Learning Materials

<tr>
<td>4 ≤ Va &lt; 5</td>
<td>Valid</td>
</tr>
<tr>
<td>Va = 5</td>
<td>Veryvalid</td>
</tr>
</tbody>
</table>

Note: Va is the value of determination level validity scale of learning materials.

Learning materials have been revised based on input from experts and samples tested outside of the classroom in order to get eligible subjects. Then, the test results are analyzed for validity and reliability. The formula used to calculate the validity is the product moment correlation [9], that is:

\[ r_{xy} = \frac{N \sum xy - (\sum x)(\sum y)}{\sqrt{[N \sum x^2 - (\sum x)^2][N \sum y^2 - (\sum y)^2]}} \]

Note:
- \( r_{xy} \): correlation coefficient between variable x and y
- \( N \): the number of students who take the test (sample)

Then, to determine the coefficient of reliability of a test used in narrative form alpha formula [10], as follows:

\[ \alpha = \left( \frac{k}{k-1} \right) \left( 1 - \frac{\sum \sigma^2}{\sigma_t^2} \right) \]

Note:
- \( \alpha \): reliability coefficient test
- \( k \): the number of test items
- \( \sum \sigma^2_h \): the number of variance test scores of each item
- \( \sigma_t^2 \): total variance

5. **The Practicality of Learning Materials**

The practicality of the learning materials was observed based on the validator's assessment and the implementation of learning materials. The validator assessment criteria are met if it is found on the validation sheet that all validators states that learning materials can be used with "a few revisions" or "no revision".

Furthermore, the learning materials implementation was observed based on the observer's assessment where they chose score 1 to 5 on each aspect of learning materials implementation that were lesson plans, teacher’s book, student’s books, student’s work sheets. The average total score obtained was categorized into the percentage of learning implementation and will be outlined in Tabel 2.

Table 2. Qualification Percentage of Learning Implementation

<td>Poor</td>
</tr>
<tr>
<td>(&lt; 60 )</td>
<td>Very Poor</td>
</tr>
</tbody>
</table>

Note: \( k \) = Average total of learning materials implementation

6. **The Effectiveness of Learning Materials**

The effectiveness of learning materials was observed based on students’ active activity meets the criteria of achieving the percentage of ideal time set, mastery of students’ connection ability clasically, that is minimum 85% students follow learning able to reach score, and 80% students give positive responses to learning materials.

III. RESULT

**Define**

The purpose of learning can be identified by first analyzing instructional needs. The process of identifying instructional needs begins with identifying problems in the field. Based on preliminary observations, students' mathematical disposition and connection ability are still low. That's because students are not accustomed to using the connection ability so that the impact also on the low students’ mathematical disposition. This is also supported by the teachers of state schools who have not been able to develop learning materials that focus to increases' students' mathematical disposition and connection ability. Based on these findings, the main purpose of developing this materials is to develop learning materials to improve students' mathematical disposition and connection ability.

**Design**

The main activity of this step was to write the initial draft of learning materials including the lesson plans, teacher’s book, students’ books, students’ work sheets, and test of connection ability and questionnaires mathematical
disposition. The instructional materials were based on KI, KD, and indicators on social arithmetic material, and adjusted to the purpose of learning and improving mathematical disposition and connection ability. Based on these objectives, 5 essays and mathematical disposition questionnaires consisting of 30 questions were prepared.

Develop

1. Validity

At this stage content validity and construct validity are performed. Content validity is done by 5 validators. Validation results by the validator indicate that all learning materials developed have met the valid criteria with a total average value of teacher book of 4.25, student books 4.37, LKS 4.31, test of mathematical connection ability and statement item of mathematical disposition questionnaire has also been in valid category. While the validity of constructs obtained by providing tests of connection and mathematical disposition to students who have learned the material. The result of construct validity indicates that the test grain of connection ability and the questionnaire of mathematical disposition is valid. Then calculated the reliability of the test items of connection ability and the matrix disposition questionnaire and obtained that the pretest reliability of mathematical connection ability of 0.613 (high category), posttest mathematical connection ability of 0.810 (very high category) and mathematical disposition questionnaire of 0.932 (very high category).

1. Practically on Trial 1

The first criterion of practicality has been met as all validators assume that the developed learning materials can be used with little revision. This assessment is given to experts and practitioners at once with the provision of materials validation sheets. The second criterion of practicality has also been fulfilled, the percentage of learning materials implementation reaches 80.94% (good category). The implementation of the learning materials used is reviewed at each meeting. The implementation of all learning materials used in the research is observed by an observer who is a teacher of mathematics studies at every meeting conducted. Thus, learning materials developed in trial 1 can be said to be practical.

2. Effectiveness on Trial 1

The first criterion of effectiveness is the mastery of student’s mathematical connection ability in class and it is found that 17 students complete (77.3%) and 5 non students (22.7%) from 22 students who followed postest of mathematical connection. Thus, the posttest result of students’ mathematical connection ability in trial 1 has not fulfilled the classical completeness because it only got 77.3%. So it can be concluded that the completeness of mathematical connection ability has not been classically met.

The second criterion of effectiveness is students’ activity fulfills ideal time percentage and it is found that there are 4 categories (category 1, 3, 4 and 5) that have reached percentage of ideal time and there is 1 category not fulfill percentage of ideal time, that is activity category reading student’s book and student’s worsheet (category 2). That's 3 out of 5 categories (categories 4 and 5 are met) has reached the percentage of ideal time in trial 1. The average percentage of ideal time of student activity time in trial 1 will be outlined in Table 3.

<table>
<thead>
<tr>
<th>Meeting</th>
<th>Frequency For Each Type of Activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>20.49 11.46 30.21 31.94 5.90</td>
</tr>
<tr>
<td>II</td>
<td>18.23 19.79 25.52 32.29 4.17</td>
</tr>
<tr>
<td>III</td>
<td>22.57 12.85 23.96 33.33 7.29</td>
</tr>
<tr>
<td>IV</td>
<td>22.57 14.93 24.65 29.51 7.29</td>
</tr>
<tr>
<td>Average</td>
<td>24.15 14.75 26.08 31.76 6.16</td>
</tr>
</tbody>
</table>

Criterion activity:

Activity 1 : 20% ≤ Percentage of Ideal Time ≤ 30 %
Activity 2 : 10% ≤ Percentage of Ideal Time ≤ 20 %
Activity 3 : 25% ≤ Percentage of Ideal Time ≤ 35 %
Activity 4 : 25% ≤ Percentage of Ideal Time ≤ 35 %
Activity 5 : 0% ≤ Percentage of Ideal Time ≤ 5%

The third criterion of effectiveness is students’ positive response and it is found that the average percentage of student’s response is above 80%. So it can be concluded that the student’s response is in positive category.

Based on the above description it can be concluded that the learning materials has not met the criteria effectively so that it needs to be revised to some learning materials components developed with the hope of problem based learning material can improve the ability of student’s mathematical connection and disposition on trial 2.

3. Practically on Trial 2

The first criterion of practicality has been met as all validators assume that the developed learning materials can be used with little revision. This assessment is given to experts and practitioners at once with the provision of materials validation sheets. The second criterion of practicality has also been fulfilled, the percentage of learning materials implementation reaches 85.06% (good category). The implementation of the learning materials used is reviewed at each meeting. The implementation of all learning materials used in the research is observed by an observer who is a teacher of mathematics studies at every meeting conducted. Thus, the learning materials developed in trial 1 can be said to be practical.

4. Effectiveness on Trial 2

The first criterion of effectiveness is the mastery of student’s mathematical connection ability in class and it is
found that 21 students are complete (91.3%) and 2 students are not complete (8.7%) from 23 students who followed postest of mathematical connection. Thus, the posttest result of students' mathematical connection ability in trial 2 has fulfilled the classical completeness because it got 91.3%. So it can be concluded that the completeness of the ability of mathematical connection has been classically met.

The second criterion of effectiveness is student’s activity fulfills with ideal time percentage and it is found that all categories of student’s activity have reached the percentage of ideal time set. So it can be concluded that the percentage of ideal time student activity on trial 2 already meet the criteria of achieving the percentage of ideal time set. The average percentage of ideal time of student activity time in trial 2 will be outlined in Table 4.

<table>
<thead>
<tr>
<th>Meeting</th>
<th>Frequency For Each Type of Activity</th>
</tr>
</thead>
<tbody>
<tr>
<td>I</td>
<td>20,14 14,24 29,15 33,32 2,78</td>
</tr>
<tr>
<td>II</td>
<td>23,52 12,5 28,13 28,65 5,21</td>
</tr>
<tr>
<td>III</td>
<td>23,61 11,46 23,61 34,72 6,6</td>
</tr>
<tr>
<td>IV</td>
<td>25,35 15,28 23,61 23,26 5,7</td>
</tr>
<tr>
<td>Average</td>
<td>23,79 13,75 25,56 29,13 4,85</td>
</tr>
</tbody>
</table>

Criterion activity:
Activity 1: 20% ≤ Percentage of Ideal Time ≤ 30%
Activity 2: 10% ≤ Percentage of Ideal Time ≤ 20%
Activity 3: 25% ≤ Percentage of Ideal Time ≤ 35%
Activity 4: 25% ≤ Percentage of Ideal Time ≤ 35%
Activity 5: 0% ≤ Percentage of Ideal Time ≤ 5%

The third criterion of effectiveness is student’s positive response and it is found that the average percentage of student response aspect is above 80%. So it can be concluded that the student response is in positive category.

Based on the above description it can be concluded that the learning materials have met the criteria valid, practical and effective.

5. The Improvement of Mathematical connection Ability
The improvement mathematical connectionability is the fulfillment of indicators of the mathematical connection ability in a better direction according to the criteria established through the process of improving the development of learning materials and reflection of the practice of learning.

The improvement of students’ mathematical connection ability with the developed material was seen by calculating the normalized gain index from the pretest and postest result of mathematical connection capability obtained by the students on trial 1 and trial 2. The average gain value in test 1 was 0.48 included in the medium category. While the average value of gain in trial 2 is 0.61 included in the medium category as well. The results indicate that there is an increase in the students’ mathematical connection ability from trial 1 to trial 2. Gain of students' mathematical connection ability can be seen in the Table 5.

### Table 5. Gain of Student Mathematical Connection in Test 1 and Test 2

</tbody>
</table>

6. The Improvement of Mathematical Disposition
The improvement of mathematical disposition seen by comparing the mean score of students' mathematical disposition questionnaire on trial 1 and trial 2.

Based on student disposition questionnaire it was found that confident indicators in using mathematics on trial 1 were 3.19 increased to 3.25 on trial 2, persistent and tenacious indicators in doing mathematics task on trial 1 was 3.09 increased to 3.29 on trial 2, the indicator had a curiosity in maths on trial 1 was 3.02 increased to 3.31 on trial 2, the indicator did reflect on the way on trial 1 was 3.23 increased to 3.30 on trial 2, the indicator of flexibility in doing mathematics work on trial 1 was 3.12 increased to 3.32 on trial 2 and the indicators applied mathematics in life daily in trial 1 was 3.18 increased to 3.2 on the trial 2. So it can be concluded that all indicators of mathematical disposition increased from trial 1 to trial 2.

Disseminate
After the learning materials were valid, practical and effective is met at the end of trial 2, then the final materials is obtained. The next step is to do a limited distribution of final materials handover to SMP Swasta Siti Hajar Medan. Submission of learning material to SMP Swasta Siti Hajar Medan the hope that the math teachers incorporated in the forum can apply the learning materials to the next lesson.

IV. CONCLUSION
The validity of learning materials have met the valid criteria with the average value of total validity of teacher book 4.25, student books 4.37, LKS 4.31, item test mathematical connectionability and the statement item of the mathematical disposition questionnaire has also been in a valid category.

Learning materials havem the practical criteria in terms of the validator response to learning materials is good and can be used with little revision and the implementation of realistic mathematics education materials is good.
Learning materials have met the effective criteria in terms of the percentage of students’ active activities during the learning process met the frame of ideal frame; 91.3% of students achieve mastery of students’ mathematical connection ability classically and more than 80% of students who give positive responses to the components of learning material.

Learning materials can improve students’ mathematical connection ability in terms of average gain of students’ mathematical connection ability in test 1 of 0.48 including in medium category, while in trial 2 increased by 0.61 also included in medium category.

Learning materials can improve students’ mathematical disposition in terms of the average indicator of mathematical disposition on trial 1 and trial 2.
